Remus,

We made arrangements today that will not require Mystique to get sign off on the 17 bays of Okada. This means I will not require Eric and Justyn to travel to country for Mystique calibration.

Josh

Hi Cory, we will look into it and confirm.

I don't think it will be problem for this, but cannot confirm the name of the resource, depending of the projects running at the same timeframe.

We would appreciate if you can send us documentation or any details insight of the project.

Kind Regards,  
Remus

Hi Remus/Angela

Christie has a projection mapping project in Montreal on a moving robot to which I had previously reached out to you for resources for however do to the complexity the project had to be put on hold.

The project is now moving forward and we are expecting to be in Laval, Montreal September 11<sup>th</sup> – 15<sup>th</sup> to continue working on our solution for end user Universal Studios Japan.

In conversations with Geoffrey Platt it was suggested that we check availability to have a Pandora's Box specialist from 360 team in Montreal on site near the end of the visit to ensure we have all the support we require.

Is there capacity to have a Pandora's Box specialist available Thursday September 14<sup>th</sup> or 15<sup>th</sup> or both if needed to support this project?

If you require more information please reach out and I would be happy to provide you with more details to better understand the requirements.

Regards,

**Cory Baranieski**
